The Functional Movement Screen The Functional Movement Screen (FMS) is a screening tool used to evaluate seven fundamental movement patterns in individuals with no current pain complaint or musculoskeletal injury. The FMS is not intended to diagnose orthopedic problems but rather to demonstrate opportunities for improved movement in individuals.

AN INTRODUCTION TO THE FUNCTIONAL MOVEMENT SCREEN

Young-Baxter functional equation has been at the heart of many different areas of mathematics and theoretical physics such as lattice integrable systems, factorized scattering in quantum field theory, braid and knot theory, and quantum groups to name a few.

Functional aficionados may find this somewhat tedious. However, this is an introductory text. The functional notation developed in the book does not correspond to any one implemented language. One of the book's objectives is to explore different approaches within functional programming and no single language encompasses these.
