Panel Data Toolbox v2.0 is a new package for MATLAB that includes functions to estimate the main econometric methods of panel data analysis. The package covers the standard fixed, between and random effects methods, that are extended to allow for instrumental variables, as well as spatial panel data specifications.

2D Panel methods – 2D Panel methods refers to numerical methods for calculating the flow around any wing section. – They are based on the replacement of the wing section’s geometry by singularity panels, such as source panels, doublet panels and vortex panels.
